

Commissioned Test Proposal

DeWalt-compatible Battery Pack

PREPARED BY

Nate Houston · Lithium Steppe

Testing methodology

We use a clearly-defined testing methodology designed to capture the characteristics that matter for real-world performance: capacity vs. label · internal resistance · high-power cycling to cutoff · destructive safety test · teardown with cell identification. Each pack is scored on Honesty, Capacity, Power, Durability, and Safety (S-F).

Full methodology & procedures: lithiumsteppe.com/methodology · lithiumsteppe.com/test-procedures

Lithium Steppe credibility

- Impartial – the score is defined by strict testing criteria, and the data is made public.
- Commissioned status is disclosed on the published report, and the report is published regardless of outcome.
- The unit is purchased from retail vendors like Amazon.

Deliverables

- Full published report on lithiumsteppe.com, with scores and tier.
- Technical report: detailed findings, commentary, and the raw dataset, delivered to your team.
- Comparative report: a detailed comparison against competitor packs (cells, construction, and measurements), delivered to your team.
- A direct line to Nate for questions, collaboration, and any other correspondence.
